

PRESS RELEASE PROJECT START

-

November 2021

The promoter of the project HOLBAV Commune announces the start of the project **"Electrification of a number of 21 households located in hard to reach areas"**.

The project benefits from a grant of € 124,000 offered by Iceland, Liechtenstein and Norway through EEA Grants under the Energy Program in Romania, Small Grant Scheme - SGS-6.1 (a): Electrification of households (EEA Grants).

The implementation period of the project is 18 months, respectively until 31.05.2023.

The general objective of the project aims to decrease the number of isolated households that have not provided electrification solutions and increase the number of families / individuals in isolated households that benefit from access to electricity.

The isolated households are located in the hilly area of Holbav commune, and in the implementation of the system of energy production from renewable sources will benefit a number of 21 households.

Short-term project objectives:

1. Electrification of 21 households in remote areas.
2. Improving living conditions for 80 people by connecting homes to electrification solutions.
3. Reduction of CO2 emissions by 7.74 tons / YEAR.

Long-term project objectives:

1. Reducing economic and social disparities between the inhabitants of Holbav commune,
2. Increasing social cohesion and equal opportunities in terms of access to education, health, employment, leisure,
3. Reduction of pollutants in Holbav commune,
4. Improving the capacity of the public administration to carry out projects for the community.

The technical solution targeted by the project involves an integrated system for producing energy from renewable sources by capturing and converting solar radiation into electricity using photovoltaic panels. The system implemented by the project will not be connected to the centralized network of the locality.
